Jack,

Here are some fairly recent quotes from the literature which speak to the validity of reduction of smoke constituents.

Nice job Robbie. Thanks.

rick

+6Dear Rick - Attached is a summary of exposure reduction statements from 1957 - 2003 made by various public health authorities. Input was provided by the various WSA coordinators and literature searches conducted by the library. There are likely other quotes from Samet (NCIJ), Richard Peto, and Bofetta at IARC and Dorothy Hatsukami in the literature, but our initial search provided no additional citations. I've asked the WSA coordinators to forward any additional citations as they come across them in their readings. Ted was most helpful in providing many of the citations through the mid 90's. Please provide feedback whether this summary meets your needs and if we may be of further help.

Exposure Reduction  
Statements ...

*Best regards,
